LAZER'S STORY

Cycling is almost synonymous with Flanders. The cobbled roads, tight turns and small towns the races take place on are what make it so great. It is here, in the heart of cycling and classic races, that Lazer helmets comes to life.

In 1919 Henri Van Lerberghe won the Tour of Flanders by riding solo from start to finish. Before entering the Velodrome in Gent, he stopped and had a few beers. Afterwards on the podium he encouraged the people to go home, because he was a half day in front of the peloton anyway.

In that same year Lazer was founded, and just like Henri, we are at the front of the race. Leading the industry in innovation, design, safety and technology. Back when we started helmets were nothing like today, they

were leather caps used by men riding steel bikes over the cobbled country roads of Belgium. The difference with the lightweight, adjustable, well ventilated and stylish helmets of today couldn't be bigger.

We carried our heritage from then through the years to create the sophisticated products of today. Our products are the result of almost 100 years of experience, passion and dedication. We are always trying to create the perfect blend of design, comfort, safety and technology.

All of our products are designed in Belgium and are available in more than 50 countries. But we have never forgotten our roots, we still ride our products over cobbled farm roads and just like then, we strive to innovate, improve and create what we ourselves would want to use.

Lazer is passion, performance and the joy of riding.

HISTORY

1919

Creation of the business

1948

Development of the first bicycle helmet

1980

Creation of the commercial name Lazer

1987

First hard shell helmet specific for cycling developed in collaboration with Eddy Merckx

1994

First range of "soft shell" bicycle helmets are developed

2000

The Compact helmet is Lazer's first in-molded helmet

2005

The Genesis, Lazer's new top helmet wins the Eurobike award

2008

The next generation of helmets... the Urbanize is the first fashionable helmet for urban use

2010

The Tardiz is the perfect combination of Aerodynamics and ventilation

2011

The creation of the Lazer eyewear & the Aeroshell protects you from the elements and gives you an aerodynamic edge

2012

Helmets and eyewear should be a marriage, that's why we created the Magneto

2013

The Wasp helmet sets new standards for FAST

2014

The Z1 has it all, lightweight, comfortable, aerodynamic, well ventilated. True racing pedigree

2015

The Genesis LifeBEAM is the first smart helmet with integrated heart rate monitoring

2016

Magnto 2 cobranded with Carl Zeiss lenses & the Revolution helmet replaces the established

2017

The Wasp Air Tri combines fast and cool & we added kids eyewear to the range

2018

HELMETS

It is Lazer's mission to make innovating and comfortable products people want to wear. With today's cyclists in mind we design innovative, clever and comfortable helmets that keep you safe and make cycling more enjoyable and accessible. Doing this, Lazer wants to be the premier provider of protection and peace of mind for every active individual.

ROAD

Conquer the concrete, the cobbles, or everything else that crosses your path. These helmets are designed for safety, ventilation, comfort and lightweight! They help you to deliver your optimal performance. Hours of research, development and racing experience ultimately turn into helmets that are professional grade equipment and appreciated by many.

FYI

The Tardiz2 helmet has an open front area to allow the helmet to be used with normal eyewear for fast transitions. Additionally it has the Aquavent on top to make sure you can cool off quickly and efficiently.

INCLINATION SENSOR

The Lazer Inclusion Sensor is the ultimate training tool to make you faster. It will keep you in your most aerodynamic position so you can cheat the wind and be as fast as you can be. It's like having a personal trainer in your helmet, encouraging you to keep performing at your top level.

A personal trainer inside your helmet

Why

Amateur riders, weekend warriors, seasoned professionals, everybody is affected by fatigue during a ride, and the change in body posture it brings along with it. During a time trial or triathlon bike leg, this results in a less aerodynamic position on the bike and thus a slower ride. But how do you notice this change in body posture? Well, you couldn't up to now. But that has all changed with the arrival of the Lazer Inclusion Sensor.

By delivering you real time feedback it alerts you when you deviate from your optimal position and helps you find that sweet spot again. The Inclusion Sensor is a body posture monitor that allows you to track your aerodynamic cycling posture in real time. The monitor tracks your head and helmet position and provides you with tactile or acoustic feedback when you are out of your optimal aerodynamic position.

Before using the monitor it should be calibrated towards your optimal

aerodynamic cycling position. For the best result the calibration should take place in a wind tunnel with the help of aerodynamic experts. But it works just as well when you visit a training center or shop with experienced professionals to help you find that ideal aero position.

The Lazer Inclusion Sensor comes with specific software to set it up. In the software you can either choose to set your personal settings based on your helmet type, choose your preferred deviation (in degrees) or change the type of feedback you want to get. Furthermore the software allows you to load previously stored calibrations also, so you don't have to reset the sensor for every use.

The monitor aims at making you aware of your head position while riding, and guiding you towards that sweet spot where you cheat the wind as best as possible.

Tardiz2

MTB

Being out and about in nature brings you peace and freedom, but also unexpected bumps, rocks, branches, dirt and steep slopes. Once you leave the beaten track you better be prepared for whatever nature throws your way. Protection is key so Lazer designs helmets to elevate your riding experience to the next level while keeping your head safe.

EYEWEAR

The Lazer eyewear range is designed to deliver optimal performance and a perfect match with Lazer helmets. Lightweight, adjustability, ventilation and comfort are just a few of the keywords that are stressed during design and testing. Hours of research, development and racing experience ultimately lead to glasses that are professional grade equipment and appreciated by many.

PERFORMANCE

—

Eyewear for high performance has unique needs; the frame geometry, lens quality and used materials should all be of top quality. Lazer performance eyewear delivers on all fronts to provide you with the best possible solution out there.

MAGNETO 2 | M2 Lazer patented technology

FEATURES

- Magnetic short temples
- Interchangeable traditional temples
- Interchangeable nose pads
- Interchangeable lenses
- Repellent lens coating
- Photochromic lens options
- Ultragrip nose piece and temple tips
- Hard case & cleaning bag

DETAILS

Weight | 36g
Sizes | M-L

ACCESSORIES INCLUDED

2 types of nose pads come with frame //
Lazer provide two nose pads with the M2 and KR1 eyewear. Why? Everybody is different. An extra nose pad is included, this is traditionally suitable for an Asian fit. We've also tested this and it's great for cyclists to use in an aggressive on the drops racing position. Ensuring that the eyewear is in the correct place to keep you going faster, for longer!

FYI

The development of this full frame Magneto took over 2 years. We wanted to find a way to integrate magnets in the temples without using glue. After many trials, we came to the idea of using conically shaped magnets that are inserted within the inner temple. Perfect solution!

FRANK great value with stylish looks

FEATURES

- Panorama optics
- Adjustable temple tips
- Ultragrip temples
- Cleaning bag

DETAILS

- Weight | 31g
- Sizes | M-L

FYI

Although we can't see it, we are exposed to UV radiation daily, even in overcast weather. And because snow reflects almost 80% of UV radiation, your overall exposure is nearly doubled when skiing, snowboarding, shoveling or playing in the snow. No day can be too cold or cloudy for these Frank's we say!

KIDS

Did you know up to 70% more UV radiation reaches the retina in children's eyes than in an adult's eye? This is why Lazer added sunglasses for kids to the range. Fun designs and bright colours will keep your child wanting to wear sunglasses. Being the coolest kid on the block is just a bonus.

KIDIATOR | KIDI lightweight aviator style for kids

FEATURES

Lightweight kids model
Cleaning bag

DETAILS

Weight | 20g
Sizes | 6 - 12 y

FYI

Our eyes are ten times more sensitive to UV light than our skin and children's eyes are at the greatest risk of UV damage. Big pupils and clearer lenses mean up to 70% more UV radiation reaches the retina than in an adult's eye. Protection for your children's eyes is crucial. And because this is Lazer, we do it in style and funky colours.

TECHNOLOGIES

—

Innovation is what drives us at Lazer. We think, we design, we fail and we redesign, until we get it right. Throughout the years a lot of ideas have passed through our R&D division and they have led to some of the best performing products out there. We love to break the mold, think out of the box and create something unique. Since 1919 Lazer has pushed the boundaries of design and technology and we will never stop innovating!

An update on the original, and award winning, Rollsys fit system, the ARS operates in a similar way but provides an even smoother operation and greater size range.

Why is it advanced?

The ARS is fully integrated into the helmet and is operated by a smooth thumb wheel, situated on top of the helmet, rather than at the back. The system completely surrounds the head and allows for an accurate and progressive peripheral sizing adjustment. The fit will be symmetrically tightened without any

pressure points on the head, providing an extremely comfortable fit. Besides the comfort, the ARS is also easy to use and only requires one finger to tighten the helmet. The shape and adjustability of the ARS basket also mean it grips the back of the head firmly but allows enough space to be ponytail friendly.

In short, the ARS provides a comfortable and easy to use fit that you can adjust during the ride.

HELMETS

Z1
Blade
Magma

HELMETS

Beam
P'Nut
Nut'z

Based on the incredible Rollsys system, but even easier to operate, the Autofit system eliminates any need to manually adjust the helmet retention.

Made for simplicity

As a fully integrated system, totally invisible from the outside of the helmet, the Autofit system connects the rear basket and the front head belt of the fit system and puts a constant and even tension between these two components. To put the helmet on simply pull the rear basket and the head belt away from each other, put the helmet on your head and

Autofit system will automatically tighten itself around your head for an optimal fit each and every time!

Regardless of head size or shape, Autofit will adjust automatically to provide a secure yet comfortable fit. This easy operation makes it perfect for use in children's helmets. You will save time, energy and frustration while still providing safe and reliable head protection. A comfortable helmet that fits perfectly every time you put it on.

Updating the classic

The ATS is a new interpretation of the classic Turnfit system. We have combined the traditional Turnfit dial system with the Rollsys head basket to create an even more effective fit system.

A dial at the back of the helmet now controls a basket that grips a large part of back of the head. A quick turn of the ATS dial makes sure the basket grips the back of the head for a snug yet comfortable fit that keeps the helmet firmly in place.

The TS+ system is a direct relative of the ATS fit system. It provides the same functionality and comfort but has a different look and feel. The system combines the comfortable cradle of the Rollsys system with the ease of use from the ATS fit system.

The dial at the back controls a basket that grips a large portion of the back of the head. A quick turn of the dial makes sure the basket creates a snug, yet comfortable fit that keeps the helmet where it should be. The TS+ system is also able to accept an LED light, which mounts onto the dial.

The Aeroshell is a patented design with a plastic cover, designed to fit perfectly over specific models of Lazer helmets. The Aeroshell snaps into place and protects the riders head from wind, rain and cold while still allowing for some air movement. The Aeroshell is unique in that it is easily removed from the helmet when riding conditions are such that additional ventilation is desired.

Snap it on when the rain is pouring down and pull it off when the sun starts to shine, the Aeroshell is the perfect tool for every possible condition.

Additionally the Aeroshell provides a significant increase in Aerodynamic performance once it is installed on the helmet. By closing off the ventilation holes, the amount of aerodynamic drag the helmet creates is greatly reduced, making your road helmet into an aero helmet and resulting in a faster ride.

HELMETS

- Z1
- Genesis
- O2
- Blade

After a long ride a coffee or beer is the perfect way to relax and discuss your performance or the events of that day. But where do you leave that helmet, and how do you secure your bike without carrying a lock everywhere you ride?

You can look over your shoulder every five minutes to check if your bike is still there, and your helmet can have a place on the table, but none of those solutions are really ideal.

Wouldn't it be great if there was a way to store your helmet and secure your bike safely at the same time?! That problem is now solved with the arrival of the Cappuccinolock.

The Cappuccinolock is a revolutionary way to secure your bike using only your helmet straps. Slide the male part of your buckle into the Cappuccinolock on one side and connect the female part of your buckle on the other side. Twist the numbers to ensure the locking mechanism can't open and relax while you have your coffee. Use it to secure your helmet, or use your helmet to secure your bike, but most of all, use it to get ease of mind that your precious belongings are secured.

Roll it, lock it, leave it!

www.cappuccinolock.com

Mudcap

Besides acting as protection for the fitting mechanism, the Mudcap also acts as an expansion port for the helmet.

With the Mudcap installed it allows an LED light or the LifeBEAM system to be installed on certain helmet models.

HELMETS Z1, Blade, Magma

Aquavent

The Aquavent is a ventilation port on the top surface of certain helmet models. You can use this port and your water bottle to deliver water directly onto your head to help reduce overheating.

Adjustable Head Basket

The adjustable head basket allows the back part of the fit system (that grips the back of the head) to move up and down depending on the riders preference. This way the fit system can be adjusted even more to individual rider needs and can create more comfort.

Padding

All Lazer padding is made from performance fabrics that have a fiber-based moisture management system. This system allows perspiration to move away from the body, and through the fabric, where it can evaporate quickly, allowing the wearer to feel cooler and more comfortable.

-  SKIN
-  MOISTURE
-  INVISIBLE FRESHNESS SHIELD
-  FRESH AIR FREE FROM BACTERIA

X-static padding

X-STATIC® harnesses the power of silver to create a powerful technology that inhibits the growth of bacteria on fabrics, eliminating human-based odor for the life of the garment.

RBS

Rigidity Brace System: reinforcements for a superior resistance against multiple impacts. This system is comparable with the roll cage in race cars, in case of a crash this will keep everything together. In case of the helmet, it will keep the cracked EPS pieces together, and thus still allowing some form of protection.

Aquapad

The Aquapad is a padding that remains cooler for longer periods of time. This gel based padding diverts sweat, but also provides you with a cool feeling throughout the ride.

EVA pads

The solution for rental helmets, EVA padding is easily removed from the helmet and cleaned. The EVA material makes them durable and easy to clean.

MIPS or Multi-directional Impact Protection System adds an additional safety aspect to the helmet. It outfits a helmet with a low friction layer that reduces rotational forces in case of a crash. This replicates the brain's own protection system.

How it works

The shell and liner of the helmet are separated by a low friction layer. This means the shell of the helmet can move relative to the liner. In case of an impact the low friction layer will rotate and help to absorb a part of the impact, thereby reducing the rotational forces to the head. MIPS doesn't interfere with helmets existing protective properties. It only adds an additional way to

counter the most common type of impacts and helps protect against the most severe type of brain injuries. Lazer has developed this technology in collaboration with some of the largest universities in Sweden and has tested its efficiency with computer models and real life testing, so you don't have to.

Cyclists who want to monitor and improve their performance cannot ignore their heart rate and other vital functions. Personal heart rate provides a window to an individual's fitness and athletic ability.

To do this, Lazer has the perfect solution with the LifeBEAM integration. The LifeBEAM technology is the world's first and only device that can be placed in a cycling helmet to continuously measure the rider's heart rate, no chest strap needed. This combination seamlessly pairs to fitness devices and smartphones through ANT+ and Bluetooth 4.0 and displays the rider's real-time heart rate.

This proprietary optical sensor and algorithm were developed, tested, and

perfected in the aerospace industry under extreme conditions. As a result, LifeBEAM technology is completely motion resistant, so it can be used on any terrain, even the most intense MTB trails. The device is also truly all-weather, performing well in any condition such as rain, humidity, and extreme hot and cold climates.

It provides the perfect solution for women or people who feel constricted by chest straps. You are wearing your helmet anyways, why not use it to keep an eye on your heart rate.

www.lazersport.com/lifebeam

Visibility | Reflection, flash colors, integrated lights

TS+ LED

This LED light attaches to the dial of the fit system to provide additional visibility when the light fades. Just snap it on when needed.

Flash colors

Flash colors provide the helmet with extra visibility. The flash color is actually integrated into the paint and not the outer material, so no risk of fading.

Rollsys LED

The Rollsys system is not only extremely comfortable, it can also hold a replaceable LED light to increase your visibility with ease.

Ultrax+ LED

The Ultrax+ helmet has the option of adding and LED light or reflector at the back of the helmet. Be safe, be seen!

Z-LED

The rechargeable Z-LED is a fully integrated light solution that provides excellent visibility.

Safety

Riding in the dusk? Stayed out on a bike ride a little too late? Forgot to bring your lights with you? Whatever the situation, it is important to be seen by other road users. So you better make sure there is a way you can be spotted. Enter high visibility colors, integrated lights and reflective material...

At Lazer, safety is our major concern. That's why we have added flash colors, reflective material and integrated lights to 80% of our helmet range. Your helmet is the highest and most visible point for other road users,

so making sure it stands out is the best way to attract attention.

In that regard we have outfitted our helmets with additional ways to be seen. Some helmets have integrated LED lights, reflective stickers, ...and much more. Almost every model has a high visibility flash color option which is non fading, and unique to Lazer.

Whatever the conditions, make sure you are seen, with a Lazer helmet.

Eyewear integration

A perfect combination

Magneto is an award winning and revolutionary sunglass/helmet interface that offers the user improved comfort and superior fit. We feel that eyewear and helmets should be a perfect marriage, one complementing the other and working together.

That is why we design our helmets and eyewear to work with each other, nowhere is this more obvious than with our Magneto eyewear system. Recognizing that traditional sunglass temples cause trouble for some wearers both in terms of fit, contact with the helmet's fit system and added pressure to the side of the head at the contact points, Lazer has eliminated these temple pieces and replaced them with a clever magnetic attachment system.

The helmet strap features two clips with a small piece of rubber-coated metal at the center and this allows for an attachment with magnets that are imbedded in

two short tabs that connect to the sunglass lens. The result is a secure fit of the lens on the face but with the ability for adjustment both up and down as well as forwards and backwards.

With Magneto in use there is no possibility for interference with the fit system and the side of the head is left unobstructed to keep cool. The absence of temples also results in very little pressure on the user's head which eliminates headaches and fatigue during a long day in the saddle.

To improve the usability there are also MagDocs to store Magneto on the helmet when not wearing it. That way you can clip the eyewear onto the helmet and put them back on when you need them, creating a perfect symbiosis between the helmet and the eyewear.

Magneto | patented

MagClip

The MagClip is a clip that can adapt any helmet for use with our Magneto sunglass line. The clip, which is included with the purchase of the Magneto, mounts on the forward most strap of your helmet. The MagClip works for all straps. In order to mount it on thick straps, remove the adaptor coin inserted in the rear of the clip.

MagDoc

The MagDoc mounts onto the helmet with 3M tape and is used as a docking station for the Magneto sunglasses while not in use. That way you can clip the eyewear onto the helmet and put them back on when you need them, creating a perfect symbiosis between the helmet and the eyewear.

Eyewear features

Optical advantage

Panoramic, mirror and photochromic technologies for a wide view and adjusting lens tint. Superior optical clarity and protection for all day use. All lenses are made of shatterproof polycarbonate with 100% UVA and UVB protection.

Ultragrip nose piece and temple tips

Ultragrip nose pieces and temples tips keep the eyewear in place no matter what the conditions are.

Lens ventilation

Lens vents combined with contours in the frame keep air moving to decrease fogging.

Shortened temples

All Lazer Eyewear has shortened temples to assure maximum comfort when wearing a helmet: no more interfering of your eyewear with the helmet or it's retention system in the back.

Temples shaped to stay in helmet vents

Temples shaped to keep the glasses in place when stored in helmet ventilation holes.

Flex frame technology

Lightweight Grilamid material combined with adjustable temples for a quick custom fit.

Polycarbonate lenses

Safety: polycarbonate is known for being shatterproof and impact resistant

Our lenses are bullet-tested to make sure we offer optimal protection

100% UVA and UVB protection

All lenses are submitted to the prisma test to ensure optical deviation 0

Hydrophobic treatment to reduce the effects of dirt, water and sweat

Superior clarity thanks to renowned suppliers such as Carl Zeiss and Essilor Sunlens

Grilamid frame

Low density material which makes it very lightweight

High resistance to chemical and UV-damage

Combined with ultragrip rubber tips for a no-slip fit

Safety: High alternative bending strength so the impact when falling is partially absorbed by the frame & Shatterproof: ideal for sports

Lens technologies

Whether they are transparent or dark, all our lenses offer 100% UVA and UVB protection. The standard lenses are brown or grey smoke and have a mirror coating to reduce the effect of reflections. This mirror comes in different colours such as blue, rainbow, gold, silver, etc.

Standard lenses

Brown

CATEGORY 3
USE full sunlight - increases contrast

Grey Smoke

CATEGORY 3
USE full sunlight - midday

Additional lenses

Yellow

CATEGORY 1
USE partial sunlight - overcast

Clear

CATEGORY 0
USE no sunlight - rain / night

Photochromic lenses

Melanin

CATEGORY 2 - 3
USE variable mid to full sunlight

Clear

CATEGORY 1 - 2
USE variable low to mid sunlight

Optics powered by Carl Zeiss Vision Sunlens

For the high-end top models in our range, Lazer cooperates with Carl Zeiss Vision Sunlens. As the ZEISS brand stands for total eyesight protection and visual excellence, every ZEISS sunless achieves premium optical performance, high material pureness and long-term durability.

Panoramic lens technology

Lazer Sport eyewear offers panorama lenses that enhance and widen the field of clear vision by 20% to provide the wearer a sharper, clearer view as the eye moves from the center of the lens to the outer edge.

Photochromic lenses

These lenses adjust automatically to changing light conditions allowing one lens to be used throughout the day. The clear photochromic lens changes from 75% to 25% light transmission for overcast conditions and riding into the evening.

Melanin photochromic lenses

Synthetic melanin developed with Essilor Sunlens is injected into the photochromic lens providing sun protection equivalent to 140 SPF sunscreen. These lenses also filter blue light to eliminate optical blurring and haziness.

Polarization

The polarized lenses eliminate the diagonal rays of light that are caused by reflections on the water, windows of cars, wet roads etc. giving you a more sharp and clear sight. These lenses are highly suitable for on the water, fishing or driving.

Optically decentered lenses

Optically decentered lenses to maintain supreme optical quality for extensively curved lenses.

Hard coating

Hard coating to better protect your lenses from scratches.

Repellent coating

The coating repels moisture, grease, dust and dirt giving you an easy to clean, low maintenance lens.

Anti-reflective coating

Anti-reflective coating is applied to the inside of most Lazer lenses. This technology avoids annoying reflections from glare and bright light that often comes from all directions.

Icons

Comfort

Rollsys
Turn me on! Simply control the size and the comfort by turning the wheel on the top of the helmet.

ATS
A combination of the Rollsys and Turnfit systems.

TS+
A combination of the Rollsys and Turnfit systems.

ARS
An update of original Rollsys retention system.

Autofit
Automatic system that delivers equal and constant tension.

MIPS®
Multi-directional Impact Protection System.

Comfit 3

Morpho System
Completely detachable interior which perfectly adjusts to the rider's head shape.

Coolmax
Makes moisture disappear, dries quickly and is breathable.

Magic Buckle
Magnetic buckle to improve comfort and ease of use.

Aquavent
Ventilation port on the top of the helmet to disperse water over the head.

Adjustable head basket
The rear head basket is adjustable in height for improved comfort and fit.

Magneto
Revolutionary sunglass/helmet interface that offers the user improved comfort and superior fit.

Double D
Ring Buckle.

Technology

Channeled Ventilation
Internal ventilation channels for optimum airflow.

Aerodynamic
Wind tunnel tested for maximum airflow.

DLA
Dual layer Aerodynamics.

Head-Down Aerodynamics
Optimal aerodynamics while riding with head down.

Wind tunnel tested
Helmet tested in wind tunnel facility.

Vent tunnel tested
Helmet tested in ventilation tunnel facility.

Optional Aeroshell®
Snap on cover that fits over your helmet and protects you from rain and snow.

Inclination sensor
A body posture monitor to track your aerodynamic cycling posture in real time.

LifeBEAM
A heart rate monitoring system inside the helmet.

T-Pro
The helmet shell drops down further to protect your temple area.

Cappuccinolock
An easy way to secure your helmet (and bike) using just your helmet straps.

Safety

Reflective
Extra reflective features to increase visibility and safety.

RBS
Rigidity Brace System: Reinforcements for a superior helmet resistance against multi impacts.

Neck Reinforcement
Designed with a special neck reinforcement.

Design

Optional Crazy Nutshell
Shell that fits perfectly over the helmet to quickly change the look of the helmet.
